

## FEATURE POLICY

- ▶ Perhaps 'Feature Policy' is the answer
- ▶ A bit like 'Content Security Policy' but for features
- ▶ Involves the *site* sending headers to opt into & out of browser features
- ▶ Currently a proposal: <https://wicg.github.io/feature-policy/>
- ▶ Check it out!

## AND THE PLATFORMS?

- ▶ A platform becomes nothing less mundane than simply being “another thing to test”.
- ▶ Variable experiences become the norm (no more ‘pixel-perfect’).
- ▶ ‘Wrapper pattern’ is our best way of dealing with platforms in the meantime.
