# IT'S UP TO THE PLATFORM TO REQUEST THE VERSION IT NEEDS

This is the BBC article renderer.

It's rendering the text fine as we go.

But then we reach that include path.

It knows it needs the embed version.

So it appends /embed to the path.

And fetches the /embed version from AWS.

THE SAME PRINCIPLE APPLIES FOR EVERY PLATFORM

The same app.min.js is used everywhere. All that changes is the HTML entrypoint.

/include/visual-journalism/123-quiz/embed — Include ▼

/include/visual-journalism/123-quiz/standalone — Include ▼

/include/visual-journalism/123-quiz/news-app — Include ▼
